Abstracts

An LED is a semiconductor light source used for general lighting, backlighting, and automotive lighting in the Residential, Office, Retail, Hospitality, Industrial, Outdoor, and Architectural segments. Given its efficiency and low cost, LED helps to address the key issues such as energy crisis, resource scarcity, and climate change. It also enhances safety and productivity. Lighting consumes about 20 percent of the power generated worldwide, and the usage of LED lighting will help to save up to 40 percent of energy annually.

Scope of the Report:

This report focuses on the General LED Lighting in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The preference for eco-friendly bulbs over incandescent and CFL bulbs is one of the major trends witnessed in the market. Increased cost of energy, growing awareness about environmental issues, and increased focus on reducing CO2 emissions are some of the factors stimulating demand for energy-efficient LED lighting solutions.

According to the report, the formation of R20 Regions of Climate Action is a major market driver for the General LED Lighting market in Brazil. It is focused on promoting and implementing low-carbon emission projects and aims to prevent a 2°C increase in global temperatures by 2020.

Low consumer awareness is one of the major challenges in the market. This is evident from the fact that most application segments in The global General Lighting market have a low LED penetration rate because consumers give higher preference to cost rather than the quality and nature of lighting.

The worldwide market for General LED Lighting is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
