According to our (Global Info Research) latest study, the global General Lithium Titanate market size was valued at US\$ 1904 million in 2025 and is forecast to a readjusted size of US\$ 3685 million by 2032 with a CAGR of 9.9% during review period.

In 2025, global General Lithium Titanate production reached approximately 102,778 tons, with an average global market price of around US\$18,000 per ton.

The gross profit margin of major companies in the industry is between 20% – 35%.

In 2025, the global production capacity of general lithium titanate was approximately 137,037 tons.

General Lithium Titanate is a lithium battery anode material based on spinel lithium titanate, known for excellent safety, fast charge capability, and long cycle life. It operates at a higher anode potential than graphite, reducing risk of lithium plating and improving thermal stability. It is used in applications that require high power, frequent charge-discharge cycles, and wide temperature tolerance, such as buses, industrial vehicles, grid storage, and backup power. Performance depends on particle size control, surface modification, and electrode formulation compatibility.

The industrial chain includes upstream titanium sources, lithium salts, and auxiliary reagents, plus energy and processing utilities. Midstream processing involves calcination, milling, classification, surface coating, and quality control for purity and particle distribution. Downstream demand comes from battery cell manufacturers, integrators of energy storage systems, and vehicle power applications. Supporting

services include electrochemical testing, material certification, and supply chain traceability.
