According to our (Global Info Research) latest study, the global General Purpose Clocks (GPCs) market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

General Purpose Clocks (GPCs) are electronic components that generate clock signals used for synchronization in various digital systems. These clock signals are usually square waves with a specific frequency and duty cycle. GPCs are commonly used in microprocessors, microcontrollers, digital signal processors, field-programmable gate arrays (FPGAs), and other digital circuits that require precise synchronization.

GPCs can be classified based on their output frequency range, accuracy, stability, and power consumption. They can also come in different package types, such as surface mount technology (SMT) packages, through-hole packages, and ball grid array (BGA) packages. Some GPCs also come with additional features such as spread spectrum clocking (SSC), which reduces electromagnetic interference (EMI) in high-speed digital systems.

Overall, GPCs play a crucial role in the proper functioning of digital systems by providing accurate and stable clock signals for synchronization purposes.
