Abstracts

The global General Purpose Rubber Sheathed Flexible Cable market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

General-purpose rubber-sheathed flexible cables are widely used in industrial, agricultural and daily electrical applications as mobile power cords for connecting electrical devices. They can be used outdoors and in various environments. According to the external force they are subjected to, the products are divided into medium and heavy. form:

1. Medium-sized cable: It should be flexible enough to facilitate movement and bending. The cable is light in weight and has a small outer diameter. It is very convenient to use and generally does not withstand external forces.

2. Heavy cables: should be able to withstand large mechanical external forces (extrusion, impact). The sheath has high mechanical properties, good wear resistance and elasticity, and should also have a certain degree of softness to facilitate bending and movement.

General-purpose rubber-sheathed flexible cables move frequently and are often subjected to mechanical external forces such as bending, torsion, and friction during use, so the cables are required to be soft and wear-resistant. They are often exposed to oil, and cables used outdoors must withstand sunlight, so such cables are also required to be resistant to sunlight aging, oil resistance, and moisture resistance.
