Abstracts

The surgical system is an advanced robotic platform designed to perform complex surgical procedures using a minimally invasive approach. When using a robot for surgery, the doctor's hands do not touch the patient. Once the incision position is determined, a robotic arm equipped with a camera and other surgical tools will perform operations such as cutting, hemostasis, and suture. The surgeon only needs to sit on the console of the operating room and observe and guide the robotic arm. It is reported that this technology allows doctors to perform surgery on patients at one end of the earth. At present, the most common robotic surgery is gradually increasing, such as bariatric surgery, Heller myotomy, gastrectomy, hernia repair, gallbladder removal Surgery, oral surgery and pancreatectomy.

According to our (Global Info Research) latest study, the global General Surgical Robots market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
