Abstracts

Generation management system gathers critical data from all verticals to provide the operators with enough information, which results in the efficient running of the power plant and reduction of maintenance costs. Hence, the electric industries are adopting dedicated generation management systems to focus on plant and system reliability improvements. Scope of the Report:

This report focuses on the Generation Management Systems in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

An important trend spurring the growth prospects for this market is the decreasing use of fossil fuel as it is one of the major contributors to emissions. Governments, globally, are compelled to focus on clean fuels like nuclear and renewables that reduce the toxic emissions, significantly. This approach is being supported by the governments with the aid of lucrative policies, incentives, and rebates. Over the years, the share of renewable and alternate sources of energy has risen to a great extent due to the investments flowing from the US, China, and the EU. However, the addition of clean power generation sources has made the grid more complex and multidimensional, which poses a threat to safety and stability of the grid. To manage these new resources, utilities are using generation management solutions that enable them to manage, monitor, and optimize the power generation of the renewables.

The worldwide market for Generation Management Systems is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
