Abstracts

The telecom industry is going through a transitional shift with the huge surge in data traffic and increasing smartphone penetration. The rollout of advanced networks like 4G is adding to the data traffic, which is directly impacting the demand for strong telecom networks. On-Grid: These generators are used for backup power in case of power outages, grid failure, and emergencies like natural disasters. Off-Grid: These generators are used as primary and backup power in developing countries, rural areas, and areas with unreliable grid supply.

Scope of the Report:

This report focuses on the Generator for Telecom in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

This industry research report identifies the expansion of rural telecom infrastructure to be one of the major factors that will have a positive impact on the growth of this market in the coming years. The capital intensive nature of the telecom industry makes it highly dependent on subscriber density, which is one of the major reasons for the under-development of the rural telecom industry. Increasing income levels and initiatives from governments will drive the expansion of telecom networks in rural areas. Since rural areas lack grid connectivity and reliability, this network expansion will in turn, drive the demand for generators from the telecom sector.

One of the major trends that will gain traction in the market during the next four years is the rise in adoption of hybrid power systems. When compared to conventional power supply systems, hybrid power systems have more cost-effective and energy-efficient parameters. The exponential growth of the telecom industry will lead to the installation

of telecom towers in remote locations that require a combination of renewable energy sources and diesel generators for backup power. Hybrid power systems offer several benefits such as reduced operating costs and GHG emissions and increased reliability which will also aid in driving their adoption among telecom companies.

The worldwide market for Generator for Telecom is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
