The global Generator Hydrogen Cooling System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Generator Hydrogen Cooling System is a cooler that heats up the temperature of the turbine generator when it rotates, and the hydrogen inside is cooled with water. Because hydrogen has a higher heat conductivity than air, it can cool more powerful generators. Use the developed cooling elements designed for hydrogen coolers. The cooling tubes can be stainless steel or copper alloy tubes with excellent anti-corrosion properties. The fins can be made of copper or aluminum plate fins with concave and convex surfaces. The cooling tubes and fins are used The expansion head is used to expand the tube and tightly combine to improve the heat transfer efficiency.
