Data centers are perhaps the most essential key to the information infrastructure of the country. Whether it is for a mobile app developer, or a nationwide communications company; data centers are used by a wide array of businesses to hold their information secure in an often-frantic technological world.

Scope of the Report:

This report focuses on the Generator in Data Center in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Owing to the rising number of data centers across the globe, the adoption rate of power management products has increased significantly. The growing demand for colocation facilities, especially among SMEs, is driving the demand for data centers and subsequently for diesel generators to manage power outage in data centers. In addition, to counter power outages and fluctuations in the power distribution of data centers, several enterprises have started installing generators, which will lead to the strong growth of this market over the next few years.

The Americas dominated the market in 2015 and accounted for around 42% of the overall market share. The high business dependency on data centers has led to increased power consumption by data centers, which in turn has boosted the adoption of generators in the region. Increasing construction of new facilities and the renovation of existing data centers will be the major growth-promoting factors for the market in this region.

The worldwide market for Generator in Data Center is expected to grow at a CAGR of

roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
