According to our (Global Info Research) latest study, the global Generator Stator and Rotor Cores market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The fixed part of the motor is called the stator, on which a pair of stationary main magnetic poles of DC excitation are installed; the rotating part is called the armature core, on which the armature winding is installed, and the induced electromotive force is generated after electrification, acting as a rotating After the magnetic field, electromagnetic torque is generated for energy conversion. The shape of the stator winding and the embedded installation method are distinguished. The stator winding can be divided into two types: centralized and distributed according to the shape of the coil winding and the embedded wiring method.
