According to our (Global Info Research) latest study, the global Generator Stator and Rotor Punching Sheets market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Stator and rotor laminations are an important part of motors and generators. For large-scale and small-batch punches, the slotting method is usually used for production. The advantages of notching are that the cost of the notching die is low and the production cycle of the notching die is short. It is suitable for producing large size laminations, usually the outer diameter is from 500mm-1250mm. The slot size is more accurate than Laser Cutting.
