Abstracts

The global Generator Stator and Rotor Punching Sheets market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Stator and rotor laminations are an important part of motors and generators. For large-scale and small-batch punches, the slotting method is usually used for production. The advantages of notching are that the cost of the notching die is low and the production cycle of the notching die is short. It is suitable for producing large size laminations, usually the outer diameter is from 500mm-1250mm. The slot size is more accurate than Laser Cutting.
