Abstracts

The global Generic Magnetometer market size is expected to reach \$ 411 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032). In 2025, global generic magnetometers production reached approximately 470 k units, the average price is 650 usd/ unit. Generic magnetometers can be used to test the strength and direction of magnetic fields, to locate the orientation of devices, with integrated or separate magnetic detector units and control units to measure micro-level magnetic fields with high sensitivity.

Market Concentration and Key Players:

Internationally, the market concentration of general magnetometers is relatively high, mainly concentrated in developed countries such as Europe, America and Japan. For example, Shimadzu and Bartington Instruments and other large manufacturers; from the domestic point of view, general magnetometers still have a lot of room for development.

Manufacturing Processes and Market Trends:

The manufacturing process of general magnetometer is continuously evolving along the direction of miniaturization, intelligence and high precision, and its core driving force comes from MEMS technology, new material application and deep integration with artificial intelligence algorithm. At the material level, rare earth permanent magnet materials such as NdFeB are the key to ensure the performance of high-precision fluxgate magnetometer and quantum magnetometer, while the introduction of new materials such as two-dimensional graphene significantly improves the sensitivity of nanoelectromechanical resonant magnetometer and reduces power consumption. In terms of manufacturing process, MEMS technology enables sensor volume to be reduced to millimeter level, cost is greatly reduced, and automated assembly line ensures product consistency and reliability. Structural design focuses on anti-interference performance optimization, such as fluxgate magnetometer through magnetic core saturation effect to suppress environmental noise, and intelligent

algorithm further realizes real-time noise filtering and data calibration, improving measurement efficiency.

The market trend is characterized by steady growth and diversified applications. The demand power widely comes from geological exploration (especially deep mineral exploration), UAV navigation, intelligent transportation, biomedical treatment (such as magnetocardiogram diagnosis) and consumer electronics. The products are iterated to smaller size and lower power consumption. In the future, the competitive landscape will focus more on customized solutions and deep cultivation in vertical fields. Enterprises need to lay out in advance the MEMS process, AI algorithm integration and multi-physical field (such as temperature and pressure) fusion module development to cope with the rapid growth opportunities brought by manufacturing upgrading and aerospace investment in the Asia-Pacific region.
