Genetic toxicity impurity testing services refer to the analysis and evaluation of potential impurities or substances that may cause genetic damage or mutations. These services are typically offered by specialized laboratories or research institutions to assess the safety and potential risks of pharmaceuticals, chemicals, or other substances in terms of their genotoxicity. The testing is conducted using various in vitro and in vivo assays to determine the potential genotoxic effects of impurities or substances, including their ability to induce mutations, chromosomal damage, or DNA damage. The results of these tests help in ensuring the safety and quality of products, as well as in regulatory compliance.
