Abstracts

The global Genetically Modified Organisms (GMO) Testing Services market size is expected to reach \$ 3275.5 million by 2029, rising at a market growth of 7.5% CAGR during the forecast period (2023-2029).

As per the 2020 report by the Food and Agriculture Organization (FAO), nearly 55% of the total global production of maize was used as animal feeds, 20% for other non-food applications, and only 12% used as food products. In 2021, the US stood as the largest genetically modified crops producer, accounting for more than 37% of the total global production that covered several crops including soybeans, cotton, corn, apples, canola, sugar beets, papaya, and potatoes. The US farmers used more than 170 million acres of agricultural land for different GMO crops farming in 2019. As claimed by various scientific communities, the rising production of biotech crops globally aided in the alleviation of various global issues such as food insecurity, poverty & malnutrition, and climate change. However, as many as 39% of consumers in the US still believe that GM foods are less healthy compared to non-GM foods.

Genetically modified organisms (GMO) testing services refer to the process of checking the nutritional level of GM crops, meats, and foods. The GM products are mainly derived through certain modifications of original seeds of crops using various biotechnological methods to ensure a high yield of crops.
