## Abstracts

According to our (Global Info Research) latest study, the global Genomic Data Analysis Service market size was valued at US\$ 1976 million in 2024 and is forecast to a readjusted size of USD 4714 million by 2031 with a CAGR of 13.4% during review period.

The growth of the market is being driven by a number of factors, including:

**The increasing demand for personalized medicine:** Personalized medicine is the practice of tailoring medical treatment to the individual patient's genetic makeup. This requires genomic data analysis to identify the patient's genetic risk factors and vulnerabilities.

**The development of new genomic technologies:** New genomic technologies, such as next-generation sequencing, are generating large amounts of genomic data. This data needs to be analyzed to extract meaningful information.

**The growing prevalence of chronic diseases:** Chronic diseases, such as cancer and heart disease, are often caused by genetic mutations. Genomic data analysis can be used to identify these mutations and develop targeted treatments.

**The increasing investment in genomic research:** Governments and private companies are investing heavily in genomic research. This is leading to the development of new genomic technologies and the discovery of new genetic insights.

The genomic data analysis market is segmented by technology, application, and end-

user. By technology, the market is segmented into next-generation sequencing, microarray analysis, and others. Next-generation sequencing is the most popular technology, followed by microarray analysis.
