Abstracts

The global Genomics Blockchain market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Increasing demand for genomic data security, digitization of digital services and medical facilities, clinical application of genomic data, and continuous regulation across the healthcare industry are the key factors driving the growth of the genomics blockchain market revenue.

Blockchain technology helps patients delegate rules about their medical data usage, such as allowing certain professionals to access some of their data for a fixed period of time. Patients can link to other hospitals and collect medical information automatically through blockchain, because blockchain supports anonymous DNA sequence transmission and also allows anonymous sequencing of people's genomes.
