## **Abstracts**

Generator Batteries are charged for long periods and deliver high cranking power (starting current). Most of the Generator Batteries are manufactured as sealed and maintenance-free.

### **Scope of the Report:**

This report focuses on the Genset Battery in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

There is a growing consumer expectation for genset batteries that offer higher power density, longer service life, and quicker recharge capabilities. These attributes ensure there is sufficient crank power to start gensets even at lower temperatures. Therefore, market vendors are focusing on the manufacture of batteries that offer efficient cranking power. It is expected to increase the sales of lead-acid and NiCd batteries and propel the overall market for genset batteries over the next four years.

APAC held the largest market share in 2015 and is expected to post robust growth until 2020 on account a rising demand from India and China. This region suffers from frequent power demand-supply gap, and it has led to frequent power blackouts in countries like India, Indonesia, the Philippines, and China, thus propelling the market for genset batteries.

The worldwide market for Genset Battery is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
