According to our (Global Info Research) latest study, the global Geocomposite Drainage Net market size was valued at USD 1782.1 million in 2022 and is forecast to a readjusted size of USD 2409.4 million by 2029 with a CAGR of 4.4% during review period.

Geocomposite Drainage Net is a geotechnical material made of high-strength polyester fiber and polyethylene plastic with excellent drainage properties and pressure resistance. It is widely used in civil engineering, water conservancy engineering, environmental engineering and other fields. Its main function is drainage and reinforcement. Its three-dimensional structure allows water to be quickly discharged through the grid gaps, effectively reducing the soil moisture content and improving soil stability. At the same time, it can also withstand greater pressure, increase the pressure resistance of the soil, and prevent settlement and deformation of the soil.

Further develop new materials to improve their drainage performance, compressive strength and durability to meet changing environmental conditions and application needs.
