According to our (Global Info Research) latest study, the global Geomagnetic Parking Space Detector market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

The geomagnetic parking space detector is an intelligent parking system based on the principle of the geomagnetic field, which can monitor and identify the status of free parking spaces in the parking lot in real time. It mainly determines whether a certain position is occupied by sensing the changes in the surrounding geomagnetic field. This device usually integrates sensors, signal processing units and communication modules, which can transmit data to management systems or applications to provide users with real-time parking space information. In general, geomagnetic parking space detectors not only improve the parking experience by providing efficient and accurate parking data, but also promote the development of intelligent transportation. It can be used in public parking lots, commercial parking lots, and residential parking lots. The main manufacturers are Bosch, Valeo, PlacePod, Wanbo Technology, and Mubo Technology. Among them, PlacePod provided 300 geomagnetic parking space detectors for NVIDIA's new plant for parking lot detection.
