## Abstracts

According to our (Global Info Research) latest study, the global Geophysical Cable market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Geophysical cable, also known as a seismic cable or geophone cable, is a specialized cable used in geophysical surveys and seismic exploration. It consists of a series of sensors called geophones, spaced at specific intervals along the cable. Geophones detect ground vibrations caused by seismic sources (such as explosions or vibrations generated by heavy equipment) and convert them into electrical signals. These signals are then used to create detailed images of subsurface geological structures, helping researchers and professionals understand the composition and characteristics of the Earth's crust. Geophysical cables are a crucial tool in various fields, including oil and gas exploration, geological research, and environmental assessments.

The Global Info Research report includes an overview of the development of the Geophysical Cable industry chain, the market status of Offshore Energy Industry (Geophone Cable, Subsea Hydrophone Cable), Marine Mineral and Geological Research (Geophone Cable, Subsea Hydrophone Cable), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Geophysical Cable.
