The global Geophysical Exploration Data Acquisition Service market size is expected to reach \$ 23752 million by 2032, rising at a market growth of 4.6% CAGR during the forecast period (2026-2032).

Geophysical Exploration Data Acquisition Service refers to specialized field operations that collect subsurface physical property data to support resource exploration, infrastructure development, and environmental assessment. The service typically involves the deployment of seismic, electromagnetic, gravity, magnetic, or other geophysical measurement systems in onshore, offshore, or airborne environments, along with field crews, survey design, sensor installation, signal recording, positioning control, and real-time quality monitoring. Its core objective is to generate high-quality raw geophysical datasets that can later be processed and interpreted to identify geological structures, mineral deposits, hydrocarbons, groundwater resources, or geotechnical conditions, forming the foundational input for downstream data processing, interpretation, and reservoir or geological modeling activities.
