Geophysical Exploration Service refers to professional technical services that use physical measurement techniques to investigate and characterize subsurface geological conditions without direct excavation. These services involve the design and execution of surveys using methods such as seismic, electrical, electromagnetic, gravity, magnetic, and radar techniques to collect data about underground structures, rock properties, and fluid distribution. The collected data are processed, analyzed, and interpreted to support resource exploration, site investigation, infrastructure planning, environmental assessment, and energy development, helping clients reduce geological uncertainty and make informed technical and investment decisions.
