According to our (Global Info Research) latest study, the global Geophysical Ground Penetrating Radar market size was valued at US$ 467 million in 2025 and is forecast to a readjusted size of US$ 786 million by 2032 with a CAGR of 7.8% during review period.

Ground Penetrating Radar (GPR) is a geophysical method that uses high-frequency electromagnetic waves to detect and map underground features. It is a non-destructive testing technology widely used in various fields such as engineering, archaeology, geology, and environmental research. Ground penetrating radar technology provides valuable information about the composition, structure, and thickness of subsurface materials. The basic principle of ground penetrating radar includes transmitting electromagnetic waves to the ground and recording reflected signals.
