According to our (Global Info Research) latest study, the global Geotechnical Extension Sensors market size was valued at USD 1877.8 million in 2022 and is forecast to a readjusted size of USD 2380.3 million by 2029 with a CAGR of 3.4% during review period.

An extensometer is a high precision instrument specially designed for geologists or civil engineers to measure the elongation of a material under stress. This instrument is perfect for tensile tests. It can also determine yield strength, tensile strength, yield point elongation, strain-hardening exponent, and strain ratio. Besides this, extension-meters have a huge scope of work in the geotechnical field. They are available in various types and sizes depending upon the application area.

According to research data from the company's 'Construction Machinery Research Center', the total sales of the top 50 global construction machinery manufacturers will reach US\$230 billion in 2022. Asian companies have an absolute advantage, accounting for 50% of sales revenue, followed by Europe. Sales revenue accounted for 26%, and North America accounted for 23%. The construction machinery of the world's top 50 main engine manufacturing companies sold approximately 1.2 million units of construction machinery and equipment in 2021, with sales increasing by 9%. China is currently the world's largest factory machinery market. In 2022, the sales of construction machinery companies will account for 24% of total sales, making it the country with the highest proportion. According to data from the China Machinery Industry Federation, the operating income of the construction machinery industry in 2022 will drop by more than 12%. The operating income of China's construction machinery industry in 2022 will be 797.7 billion yuan. China's annual export volume will reach 44.3 billion US dollars, with

a net increase in export volume in two years. amounted to US\$23.3 billion.
