Abstracts

The global Geotechnical Sensors market size is expected to reach \$ 689 million by 2032, rising at a market growth of 7.5% CAGR during the forecast period (2026-2032).

Geotechnical sensors can provide information about the physical properties of the subsurface environment, for example, density, competence, and thickness of layers of soil or sediment. Sensors can provide information about stratigraphy, estimate depth to groundwater, or approximate hydraulic conductivity. An investigator must understand the properties and structure of soils and sediments to characterize a site accurately, as these conditions will affect sampling strategies and selection of technologies.

Knowledge of the subsurface will also be critical when determining the location, extent, fate and transport, and attenuation of subsurface contaminants.

Global Geotechnical Sensors key players include Geokon, Keller Group, Nova Metrix, Fugro N.V., Roctest, etc. Global top five manufacturers hold a share over 75%.

North America is the largest market, with a share about 40%, followed by China, and Europe, both have a share over 40 percent.

In terms of product, Strain Gages is the largest segment, with a share over 35%. And in terms of application, the largest application is Tunnels and Bridges, followed by Buildings and Utilities, Dams and Levees, etc.

This report studies the global Geotechnical Sensors production, demand, key manufacturers, and key regions.
