According to our (Global Info Research) latest study, the global Geotechnical Structure Monitoring market size was valued at US\$ 718 million in 2024 and is forecast to a readjusted size of USD 1025 million by 2031 with a CAGR of 5.3% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

A geotechnical structure monitor is an instrument used to monitor soil and rock deformation in real time. It is mainly used in engineering construction, geological exploration and disaster warning to assess the stability and deformation of geological bodies. By installing it on geological bodies or structures, it can detect and record deformation data such as displacement, settlement, and tilt, thereby helping engineers assess risks and make necessary adjustments.
