According to our latest research, the global Geotechnical Survey Service market size will reach USD 1143 million in 2031, growing at a CAGR of 4.3% over the analysis period.

Geotechnical investigation service refers to the professional technical service of comprehensive investigation and analysis of the geological conditions, geotechnical properties and engineering characteristics of the construction site through on-site exploration, sampling, in-situ testing and indoor testing in the early stage of engineering construction. This service aims to provide a scientific basis for the design and construction of various types of infrastructure such as construction projects, transportation projects, and water conservancy projects, evaluate the bearing capacity, stability and possible geological risks of the foundation, and ensure that the project is safe, reliable and economically reasonable. Geotechnical investigation services usually include engineering geological mapping, drilling, geophysical exploration, groundwater monitoring, geotechnical testing and other links, and are an indispensable and important basic work in engineering construction.

The development trend of geotechnical investigation services is moving towards digitalization, intelligence and greening. With the advancement of technology, modern geotechnical investigations are increasingly using advanced technologies such as drone mapping, 3D laser scanning and geographic information systems (GIS) for data collection and analysis, which improves the accuracy and efficiency of investigations. The application of intelligent tools such as automated drilling equipment and real-time monitoring systems makes in-situ testing more accurate and safe. In addition, the improvement of environmental awareness has prompted geotechnical investigation

services to pay more attention to ecological protection and sustainable development, take measures to reduce the impact on the environment during the investigation process, and optimize the design plan to reduce resource consumption.
