Geotextile Fabric Production Line is a special equipment for the professional production of geotextiles. The working principle of Geotextile Fabric Production Line is to form geotextile products after synthetic materials and fiber materials undergo a series of processing steps. Specifically, the raw materials are first stirred and screened to ensure the uniformity and consistency of the materials. Then, the materials are processed and fixed through processes such as weaving, bonding or needle punching to form the basic structure of the geotextile. Finally, after processes such as shaping, cutting and winding, the production process of the geotextile is completed. In terms of composition, the main parts of Geotextile Fabric Production Line include raw material mixing equipment, weaving equipment, bonding equipment, needle punching equipment, shaping equipment, cutting equipment and winding equipment. These equipment work together to complete the production task of geotextiles.
