Abstracts

Geotextiles are fiber-based textiles, which are manufactured with polymers such as polyamide, polyesters, polyethylene, polypropylene, polyvinyl chloride, ethylene copolymer bitumen, and chlorinated polyethylene. The predominantly used polymer is polypropylene, occupying approximately 55.5% of the total geotextiles manufactured globally. This is attributed to its multiple advantages like cost-effectiveness, flexural strength, and low coefficient and chemical reactions.

Scope of the Report:

This report focuses on the Geotextiles in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The rising concern towards soil erosion will be one of the major factors that will have a positive impact on the growth of the market. There is a rising concern of countries across the globe towards the loss of agricultural land due to soil erosion. This induces the regional governments to take initiatives to stop soil erosion. The European government has already adopted Good Agriculture and Environmental Condition (GAEC 6) requirements under European Commission to minimize soil erosion. Such increasing initiatives by governments towards the prevention of soil erosion will increase the demand for geotextiles as an erosion control aid.

The worldwide market for Geotextiles is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
