Abstracts

According to our (Global Info Research) latest study, the global Geothermal Drilling Fluid market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Ultra-deep wells or geothermal wells often face formation temperatures exceeding 220°C during drilling construction. At the same time, deep wells often encounter salt-gypsum layers. This requires the drilling fluid to have both the advantages of traditional polymer drilling fluids and further optimize its high temperature resistance and rheological properties to make it more suitable for use in complex conditions in ultra-deep wells.
