Geothermal energy is the heat from the Earth. It's clean and sustainable. Resources of geothermal energy range from the shallow ground to hot water and hot rock found a few miles beneath the Earth's surface, and down even deeper to the extremely high temperatures of molten rock called magma.

SCOPE OF THE REPORT:

This report focuses on the Geothermal Energy in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The U.S. is a major geothermal power producer in North America. Planned capacity expansions in existing power plants coupled with upcoming geothermal projects are expected to drive the market growth in the region over the next six years. Technological advancements and presence of large number of geothermal reserves in the region are expected to further complement the market growth. Policy barriers and inadequate transmission infrastructure in the region are expected to pose challenges to the North American market. Asia Pacific is expected to register considerable growth owing to large scale geothermal production in Philippines, Japan and Indonesia. Growing electricity demand in China and India coupled with increasing government intervention to produce electricity through renewable resources is expected to further augment the market growth in the region. Feed-in-tariffs in Japan are expected to drive geothermal production in the region through small scale projects which in turn is expected to complement the Asia Pacific market growth. The market in Africa is expected to be driven by growing geothermal power generation in Kenya and Ethiopia.

The worldwide market for Geothermal Energy is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
