Abstracts

Gastroesophageal reflux disease (GERD) is a chronic digestive disorder that affects the lower esophageal sphincter (LES), the ring of muscle between the stomach and esophagus. It occurs when acidic stomach juices, or food and fluids flow back up into the food pipe (esophagus). The backwash irritates the lining of the esophagus and causes GERD. It affects all ages from infants to older adults. The symptoms of GERD include difficulty while swallowing (dysphagia), heartburn sensation, regurgitation or acid reflux, dry cough, sore throat, and chest pain.
