The global Germanium Stone market size is expected to reach \$ 396 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

Germanium stone is a mineral-containing material enriched with the element germanium, known for its ability to emit far-infrared rays and generate negative ions when in contact with body heat. Commonly used in wellness products like bracelets, massage tools, and heated therapy mats, it is believed to promote blood circulation, reduce fatigue, and enhance overall well-being. While germanium's physical properties are real, especially its semi-conductive and infrared-emitting nature, many of the health claims associated with germanium stone are not scientifically proven and should be considered with caution.

This report studies the global Germanium Stone production, demand, key manufacturers, and key regions.
