The global Gerotor Hydrostatic Steering Unit market size is expected to reach \$ 631 million by 2032, rising at a market growth of 3.8% CAGR during the forecast period (2026-2032).

The Gerotor Hydrostatic Steering Unit is a hydraulic control device utilized in heavy-duty vehicles, such as construction machinery and agricultural equipment. It consists of a rotary spool valve and a cycloidal gear pair (cycloidal motor). By eliminating the mechanical linkage between the steering wheel and the steering wheels, it employs hydraulic fluid to drive the cycloidal motor, thereby enabling effortless steering. Key features include flexible operation, a compact structure, rapid response, and ease of installation.

Upstream production relies critically on high-strength cast iron, alloy steel, and high-precision sealing components. Notably, the manufacturing of the cycloidal rotor-stator pair constitutes a significant technological barrier, requiring high-precision CNC grinding processes. The midstream segment is dominated by manufacturers of hydraulic components possessing advanced precision machining capabilities. Domestic products are typically priced between 300 and 500 RMB per unit, with certain specialized models ranging from 600 to 800 RMB per unit. Global annual sales reach the magnitude of several hundred thousand units, with gross profit margins typically ranging from 20% to 35%.

This report studies the global Gerotor Hydrostatic Steering Unit production, demand, key manufacturers, and key regions.
