Abstracts

The global Gerotor Pump market size is expected to reach \$ 370 million by 2032, rising at a market growth of 2.4% CAGR during the forecast period (2026-2032).

Gerotor pumps are internal gear pumps without the crescent. The rotor is the internal (drive) gear shown below in gray, and the idler is the external (driven) gear, shown below in orange. They are primarily suitable for clean, low pressure applications such as lubrication systems or hot oil filtration systems, but can also be found in low to moderate pressure hydraulic applications.

Driving Factors:

- 1. Industrial Automation Upgrades:** The global manufacturing industry's transformation towards automation and intelligence has increased demand for hydraulic systems, a key actuator. As the core of hydraulic systems, the demand for rotary pumps has risen accordingly.
- 2. Increased Infrastructure Investment:** Increased government investment in infrastructure such as transportation and construction has driven the development of the equipment market for construction machinery and mining machinery, thereby boosting demand for rotary pumps.
- 3. Pursuit of High Efficiency and Miniaturization:** Equipment manufacturers continuously seek solutions for achieving higher efficiency in smaller spaces. Due to their compact structure, high efficiency, and light weight, rotary pumps have become an ideal choice for many OEMs.
- 4. Continuous Technological Advancements:** The emergence of new manufacturing processes (such as electrical discharge machining) has made it possible to produce customized, small-batch, high-precision rotary pump components, reducing the cost and time of prototype development and opening up possibilities for more application

scenarios. At the same time, market demand for energy-efficient hydraulic pumps is also growing.
