Abstracts

According to our (Global Info Research) latest study, the global Gesture Control Drone market size was valued at US\$ 400 million in 2025 and is forecast to a readjusted size of US\$ 903 million by 2032 with a CAGR of 12.3% during review period.

In 2025, global sales of Gesture Control Drones reached 1.85 million units, with an average selling price of \$210 per unit. Gesture Control Drones are intelligent unmanned aerial vehicles that integrate visual recognition algorithms, sensor fusion, and flight control systems. They use cameras and AI algorithms to recognize user gestures to achieve takeoff, landing, following, and shooting control. Basic operations can be completed without a traditional remote control. They are characterized by intuitive interaction, strong entertainment value, and low learning costs, and are widely used in consumer-grade aerial photography, outdoor entertainment, education and training, and short video creation. The product structure typically includes a flight control motherboard, a visual recognition module, motors and propellers, and a lithium battery. The upstream raw materials for batteries and fuselage structural components mainly involve electronic chips, CMOS cameras, lithium batteries, motors, and engineering plastics. Downstream supply relationships cover e-commerce platforms, digital retail, educational institutions, and content creator channels. Future development focuses on AI autonomous obstacle avoidance, intelligent tracking, lightweight folding structures, and multimodal interaction. The global total production capacity is approximately 2.4 million units per year, with an average gross profit margin of approximately 25%-35%. Demand and business opportunity analysis shows that with the popularization of short video creation, smart toys, and low-barrier drones, gesture-controlled drones have continuous growth potential and product upgrade potential in the consumer smart hardware market.
