Abstracts

Touchless gesture recognition occurs when a user makes movements in the air (whether intentionally or unintentionally), rather than in contact with a trackpad, touchscreen, stylus, or similar surface interface. These gestures are uniquely distinguishable as human, and are recognized and interpreted by automated systems to deduce the user's intention or status. Gesture recognition technologies include 2D cameras, 3D cameras, infrared (IR), lidar, ultrasonics, radio frequency (RF), motion-sensing gloves, and accelerometers.
