Gesture recognition is the ability of a device to identify and respond to different gestures, such as movement of hands, fingers, arms, head, or the entire body, of an individual.

Scope of the Report:

This report studies the Gesture Recognition for Consumer Electronic Devices market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Gesture Recognition for Consumer Electronic Devices market by product type and applications/end industries.

The perceptual user interface (PUI) improves the integration of gesture recognition with voice recognition, facial recognition, lip movement, and eye tracking recognition. PUI improves the efficiency and ease of use for the consumer due to the lack of physical contact with the device. Technavio's market study identifies the growth of PUI technology to be one of the primary growth factors for the gesture recognition market for consumer electronic devices. The primary benefit offered by PUI is that the consumer can use the device without touching the screen. This technology utilizes the human perceptual capabilities to acquire and present semantical information using natural techniques. With the adoption of PUI, the wear of the consumer electronic devices is reduced. Numerous vendors are focusing on developing PUIs integrated with gesture recognition.

The growing interest in the 'solution-for-all' concept will be a key trend for the growth of the gesture recognition market for consumer devices throughout the forecast period. The 'solution-for-all' concept overcomes numerous challenges faced in human-

machine interface. This solution will rectify the issue of interoperability and flexibility in various devices. With the advent of 3D cameras, numerous vendors will offer a standardized solution-for-all for various consumer electronic devices.
