According to our (Global Info Research) latest study, the global Gesture Recognition for Consumer Electronic Devices market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Gesture recognition is the ability of a device to identify and respond to different gestures, such as movement of hands, fingers, arms, head, or the entire body, of an individual.

The perceptual user interface (PUI) improves the integration of gesture recognition with voice recognition, facial recognition, lip movement, and eye tracking recognition. PUI improves the efficiency and ease of use for the consumer due to the lack of physical contact with the device. Technavio’s market study identifies the growth of PUI technology to be one of the primary growth factors for the gesture recognition market for consumer electronic devices. The primary benefit offered by PUI is that the consumer can use the device without touching the screen. This technology utilizes the human perceptual capabilities to acquire and present semantical information using natural techniques. With the adoption of PUI, the wear of the consumer electronic devices is reduced. Numerous vendors are focusing on developing PUIs integrated with gesture recognition.
