The global GFCI Controller market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A GFCI (Ground Fault Current Interrupter) controller is a device used to monitor and protect against ground fault current in an electrical circuit. It detects the difference in current by comparing it to the ground wire in the circuit. When a current leakage (such as electric shock to the human body) is detected, the controller will quickly cut off the circuit to reduce the potential risk of electric shock.
