According to our (Global Info Research) latest study, the global G/H-Class Gas Turbine market size was valued at US\$ 8629 million in 2025 and is forecast to a readjusted size of US\$ 15290 million by 2032 with a CAGR of 8.6% during review period.

G/H-class gas turbines are the models with higher technical grades among heavy-duty gas turbines. They are marked by gas working temperature (1500~1600?) and efficiency. The single-unit power range is usually 400~520MW, and the combined cycle efficiency can reach 60%~61%. They have higher power density and better combustion efficiency in design, and can work at higher temperatures and pressures, providing more stable and efficient power output. They are mainly used in large power plants, the oil and gas industry, and other industrial fields that require high power drive.
