Abstracts

The global G/H-Class Gas Turbine market size is expected to reach \$ 15290 million by 2032, rising at a market growth of 8.6% CAGR during the forecast period (2026-2032).

G/H-class gas turbines are the models with higher technical grades among heavy-duty gas turbines. They are marked by gas working temperature (1500~1600?) and efficiency. The single-unit power range is usually 400~520MW, and the combined cycle efficiency can reach 60%~61%. They have higher power density and better combustion efficiency in design, and can work at higher temperatures and pressures, providing more stable and efficient power output. They are mainly used in large power plants, the oil and gas industry, and other industrial fields that require high power drive.

This report studies the global G/H-Class Gas Turbine production, demand, key manufacturers, and key regions.
