According to our (Global Info Research) latest study, the global Gigabit BiDi Optical Module market size was valued at US\$ 312 million in 2025 and is forecast to a readjusted size of US\$ 426 million by 2032 with a CAGR of 4.6% during review period.

BIDI single-fiber bidirectional optical module needs to use different optical wavelengths in both directions to achieve simultaneous transmission of optical signals in both directions. Generally, optical modules have two ports, one transmitting port and one receiving port. However, single-fiber bidirectional optical module has only one port, which is filtered by the filter in the optical module to transmit one wavelength optical signal and receive another wavelength optical signal at the same time, or vice versa.
