## Abstracts

According to our (Global Info Research) latest study, the global Gires Tournois Interferometers market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Phase correction mirrors for ps lasers with (high) negative GDD over a bandwidth of only a few nanometers are called GT interferometers. They are standing wave resonators with (high) negative GDD over a bandwidth of a few nm, which can be used to generate dispersion using highly reflective GTI mirrors. Due to the resonance of the mirror coating, the phase of the light reflected by the GTI mirror is wavelength-dependent, so the GTI mirror can provide angle-dependent negative GDD for ultrafast intracavity dispersion control. However, GTI mirrors introduce some higher-order dispersion and can only provide negative GDD over a limited wavelength range.
