Geographic information systems (GIS) (also known as Geospatial information systems) are computer software and hardware systems that enable users to capture, store, analyse and manage spatially referenced data.

Scope of the Report:

This report studies the GIS Controller market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the GIS Controller market by product type and applications/end industries.

The systems designed for gathering, storing, analysis and interpretation of the data gathered from different sources such as geographic locations, spatial information, and other constraints are termed as geoinformation systems. The market is supported by the introduction of geographical information system application for telecommunication and broadband services, the higher advent of satellite imagery, and demand for communication networks in remote locations. The market is also fuelled by growing investments made by different governments across the world to provide a significant application in aerospace & defense, transportation, and logistics industry.

Despite various factors supporting the market growth, factors that pose a challenge to the market and act as a restraining factor include increasing vulnerability of open source software and the government regulations related to usage of location services. However, various improvements in the field of mobile telecom are expected to act as a potential growth factor, providing different opportunities for geographical information system market.

North America is dominating the global GIS controller market with the largest market share and therefore accounting for the highest revenue amount. Europe holds the second largest market following North America. Europe is an advanced region in terms of automotive, organized retail, aerospace and defense and thereby capture a lot of application segments of geographical information system in this region. Many public and private organizations have been collecting domain-specific information comprising issues such as intrusion detection, supply chain, marketing, fraud detection, and national security, thereby providing opportunities to this market. The Asia Pacific is likely to be the fastest growing market during the forecast period.

The global GIS Controller market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.
