## Abstracts

According to our (Global Info Research) latest study, the global GIS Solution market size was valued at US\$ 2502 million in 2025 and is forecast to a readjusted size of US\$ 3588 million by 2032 with a CAGR of 5.3% during review period.

To address the problems of information silos, low analytical efficiency, and insufficient decision support capabilities in traditional spatial data management, Geographic Information System (GIS) solutions emerged. Since the birth of GIS solutions in the mid-to-late 20th century, the field of spatial information processing and application has developed significantly. Currently, GIS solutions have evolved into comprehensive solutions encompassing data acquisition and processing, spatial analysis and modeling, platform development and integration, 3D visualization, and remote sensing applications. They are widely used in urban planning, resource management, environmental protection, transportation, and emergency command, providing complete solutions for spatial, visual, and intelligent integrated applications and decision support across various industries.

The growth of the GIS solutions market is deeply intertwined with the demands of smart cities, sustainable development, and new business models. Enterprises need to focus on technological innovation, service upgrades, and policy coordination, breaking through technological barriers through cloud platforms, AI integration, and data sharing, while seizing opportunities in smart cities, environmental monitoring, and resource management to achieve high-quality development.
