Abstracts

A GIS substation is a high voltage substation in which the major structures are contained in a sealed environment with sulfur hexafluoride gas as the insulating medium.

Gas insulated switchgears (GISs) are installed as substation equipment and receiving equipment for safe and stable supply of electricity. Circuit breakers, disconnectors, earthing devices, etc. are enclosed and stored in metal containers using a high-insulation-performance gas. Thus, the equipment is very compact, reliable, and safe.

SCOPE OF THE REPORT:

A GIS Substation uses a superior dielectric gas, SF₆, at moderate pressure for phase-to-phase and phase-to-ground insulation. The high voltage conductors, circuit breaker interrupters, switches, current transformers, and voltage transformers are in SF₆ gas inside grounded metal enclosures.

Our report researched the whole industry of GIS Substations including the global market, market status in different area and revenues for different types and applications of the industry, also including the financial status of vendors. Finally, from all these researches and analysis, we made some rational prediction, and the conclusions are as follows:

The worldwide market for GIS Substations is expected to grow at a CAGR of roughly 4.0% over the next five years, will reach 32110 million US\$ in 2024, from 26420 million US\$ in 2019, according to a new GIR (Global Info Research) study.
