According to our (Global Info Research) latest study, the global Glass Axial NTC Thermistors market size was valued at US\$ 80.16 million in 2025 and is forecast to a readjusted size of US\$ 96 million by 2032 with a CAGR of 2.7% during review period.

Glass Axial NTC Thermistors are electronic components commonly used for temperature measurement and temperature control applications. They feature a glass encapsulation, offering excellent heat resistance and stability, making them suitable for high-temperature environments. With their Negative Temperature Coefficient (NTC) characteristic, the resistance decreases as the temperature increases, making them ideal for use in power circuits, home appliances, automotive electronics, and temperature protection systems. These thermistors offer high precision, reliability, and fast response times for accurate temperature sensing.
