Glass ceramics are a class of materials that combine properties of both glass and ceramics. They are produced through a controlled crystallization process of glass, where the glass is first formed and then partially crystallized by heat treatment. This process creates a material that has a crystalline structure within a glassy matrix, offering unique properties that make glass ceramics suitable for a wide range of applications.

Glass ceramics have become an essential material in the home appliance industry, offering a combination of functionality, durability, and design flexibility. Their widespread use in cooktops, ovens, countertops, and other household appliances highlights their importance in modern kitchen and home design, where both performance and aesthetics are key considerations.

Global top three manufacturers of glass ceramics have a combined market share of 57%. Asia Pacific is the largest market, with a share about 45%, followed by Europe and North America, both have a share about 25 %.
